

Hakan Karaosman is a sustainability management professional and academic researcher, focusing on supply chain sustainability in the fashion industry. Previously, he was a sustainability consultant, assisting companies to report their carbon footprint and CSR performance. He is currently the principal researcher of Sustainable Luxury Academy, an observatory research project that is developed by Politecnico di Milano School of Management and Mazars and that is aiming to spread ethical and environmental stewardship across luxury supply networks.

He has written several academic papers for international publications including *Journal of Business Research*, *Journal of Fashion Marketing and Management*, *Sustainability*, *Business Process Management*, *Vogue Italia* and *Corriere della Sera* as well as various book chapters, industrial reports and essays on fashion supply chain sustainability. He has been a *scientific committee member* of the International Workshop on Luxury Retail, Operations and Supply Chain Management, *assistant curator* of State of Fashion 2018 - Searching for New Luxury (the first-large scale international public event dedicated to sustainable and fair fashion), *academic partner* for the Sustainable Thinking exhibit of Salvatore Ferragamo, *expert* for the project on apparel and footwear supply chain transparency and traceability developed by the United Nations, *organizer* of a number of industrial engagement events, and *advisory board member* of the Sustainable Luxury Academy. He holds BSc. in Environmental Engineering, MSc. in Management in Engineering of Energy and Environment and double degree Ph.D. in Industrial Management.
